ExploMar to showcase acclaimed electric propulsion systems at Metstrade 2025

ExploMar will present its latest electric outboard systems and battery technologies at this year's Metstrade, running from 18-20 November, where visitors can explore the company's high-performance electric propulsion solutions developed and tested in real operating conditions around the world.

Over the past year, ExploMar's systems have been successfully deployed in a variety of vessels – from commercial ferries and passenger boats to leisure and fishing craft. These real-world applications have demonstrated the systems' strength, reliability and efficiency across a wide range of marine environments, underlining their suitability for both professional and recreational use.

The company's showcase will include the WAVE 70+, WAVE 150+ and WAVE 300 electric outboards, and SI battery system. Together, they deliver strong performance, extended range and quiet, low-maintenance operation – providing a practical and sustainable alternative to conventional marine propulsion.

"Our focus is on delivering proven technology that meets the real demands of operators," says Alex Dong, CEO of ExploMar. "The systems we're bringing to Metstrade have already shown their capabilities in the field, and demonstrate our relentless drive in developing clean, reliable electric propulsion for a wide range of marine applications."

ExploMar will be showcasing its products at booth 05.104 in Hall 5 and in the Next-Generation Propulsion area in Hall 13, where the team will be on hand to talk about its range of electric outboards on offer.

Looking ahead, ExploMar will continue to develop reliable, high-performance electric outboard systems and expand its global reach. By strengthening its sales and service network and working closely with international partners, the company aims to drive the transition to cleaner, more sustainable water transport worldwide.

Notes for editors:

ExploMar

- Founded in 2021, ExploMar is a pioneering force in high-performance electric water mobility.
- Established by experts from the new energy vehicle, marine and aviation industries, the company is dedicated to shaping a zero-carbon, intelligent future for water transport.
- ExploMar's advanced electric outboard systems – available in 70HP, 150HP and 300HP models – offer smart functions, low maintenance and zero pollution, providing users with an unparalleled boating experience.
- Headquartered in Shanghai, ExploMar operates an intelligent manufacturing base in Changshu, where R&D, testing and production take place.
- With an annual production capacity of up to 1,000 units, ExploMar continues to lead the charge in sustainable marine propulsion worldwide.
